

Description

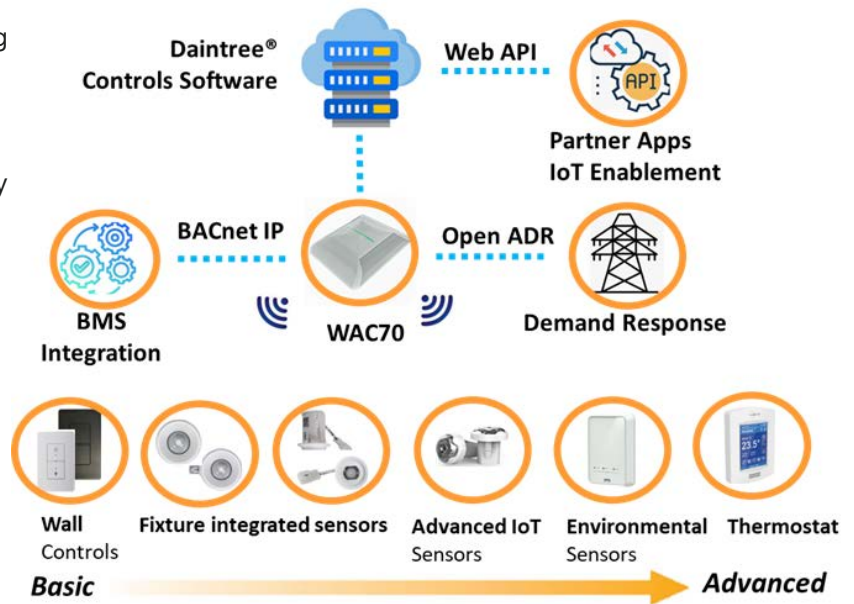

Cloud Hosting & Support services include software licensing, cloud hosting fees, and a technical support contract. Bundled subscriptions are available in one year or multi year terms as shown in the table below. **These subscriptions provide the recurring cloud hosting & support required for DCS (Daintree® Controls Software).**

The **Software License and Cloud Hosting** options enable the full capabilities of the Daintree® Networked platform for the selected term. Licenses are nontransferable, nonexclusive, and limited to the customer’s internal business use.

When paired with the DCS interface, the platform extends far beyond lighting control. Additional building systems—such as HVAC equipment, fans, and water heaters—can be monitored and controlled directly or through BACnet or the Public API. DCS delivers centralized monitoring, control, and automation to support consistent performance and improved energy efficiency across your enterprise.

Support Services include regular software updates and technical support services (subject to Current’s Support Services Policy in effect at the time the services are provided). Current Global Support Services strives to provide world-class service, with the goal of providing quick solutions and helping your staff become proficient in DCS operation.

Daintree® Networked is a powerful, class-leading enterprise site management platform. At the core of each Daintree deployment is a wireless networked system that is operated through the web-based/ cloud-hosted Daintree® Controls Software (DCS) program. DCS enables site managers and facilities staff to control and monitor single or multi-site portfolios and to integrate a range of Internet of Things (IoT) solutions tailored to each application.
