

LIGHTING CONTROLS

Simple, Seamless & Scalable Solutions for Connected Lighting

The NX Lighting Controls Panel (NXP2 Series) is a robust and reliable panel that can operate standalone or as a NX networked device. The NX Panel meets all applicable code and energy requirements, is fully scalable, easy to install, and easy to program and control from the NX Lighting Controls mobile app. Specify the new NX Panel to exceed your lighting control needs today.

Flexible & Cost-Effective Solution

The NX Lighting Controls Panel simplifies lighting control by centralizing the interface and connection points in an enclosure providing an installer-friendly solution that reduces time and costs to deploy code compliant control solutions.

Scalable

The NX Panel has multiple panel sizes for small and large applications with matching number of relays and dimmers.

Networkable

The NX Panel provides a scalable, centralized control solution for both standalone and networked applications.

Bluetooth® Programmable

The NX Panel can be programmed via the NX Lighting Controls mobile app with the addition of NXSMP sensor or NXBTC radio.

Integrated Time Clock

The NX Panel includes an integral time clock for affordable and simple scheduling capability.

Code Compliant

The NX Panel meets or exceeds all energy code requirements, allowing you to drive sustainability and maximize return through energy saving measures.

Meet Code and Save Energy

NX Panels can maximize energy savings and meet or exceed today's energy code requirements.

High End Trim - An artificial maximum light output set below actual maximum light output for each space

Continuous Daylighting - Automatically turns lights down to a reduced level or off based on the amount of daylight present in a space

Local Control - Manual lighting controls that control all the lights in that space and requires human intervention

Daylight OFF - Automatically turns the lights off based on the amount of daylight

Multi-Level Control - Providing additional light levels in a space beyond Full ON and Full OFF

BMS Integration - Integrated low voltage inputs and dry contact outputs provide an interface for BMS systems to control lighting and other building systems based on schedule or input control

Plug Load Control - Automatically turns off designated receptacles in response to all occupants leaving the space or time of day

Egress Lighting - The code establishes minimum criteria for the design of egress facilities so as to allow prompt escape of occupants from buildings, or where desirable, into safe areas within buildings

Scheduling - Controls light levels based on facility schedule

Astronomical Time Clock - Controls light levels based on sunrise/sunset and project location

Setback - Automatically turns lights down to a reduced level after all occupants leave the area

Occupancy Sensor Full OFF - Automatically turns the lights off within a set period of time after all occupants leave the space

Occupancy Sensor Partial ON - Automatically turns lights on to a reduced level between full on and full off when occupants enter the space

Occupancy Sensor Partial OFF - Automatically turns lights down to a reduced level between full on and full off after all occupants leave the space

Application Success

The NX Panel supports exterior and interior commercial lighting control applications with broad features and intuitive user interfaces to address energy code requirements and reduce energy costs under a single relay panel.

Commercial

- ON/OFF and 0–10V dimming control to maximize controlled loads
- Occupancy or Vacancy modes to meet energy codes
- Open or Closed loop daylight sensing options

Education

- Accommodate common area lighting typically on a schedule or occupancy control
- Single or multi-zone daylight harvesting
- Multiple wall station options provide easy to use lighting control

Industrial

- Accommodates high mounting heights found in warehouses and manufacturing
- Works well in scheduled situations where occupants come in and vacate on regular basis

Parking and Site Lighting

- Easily meets outdoor lighting code requirements
- Works with occupancy or schedule control
- Easily can use existing homeruns for retrofit applications

Retail

- Provides a centralized maintenance solution
- Flexible schedule based control aligns well with retail requirements
- Scheduling offset from “open/close” time for easy changes

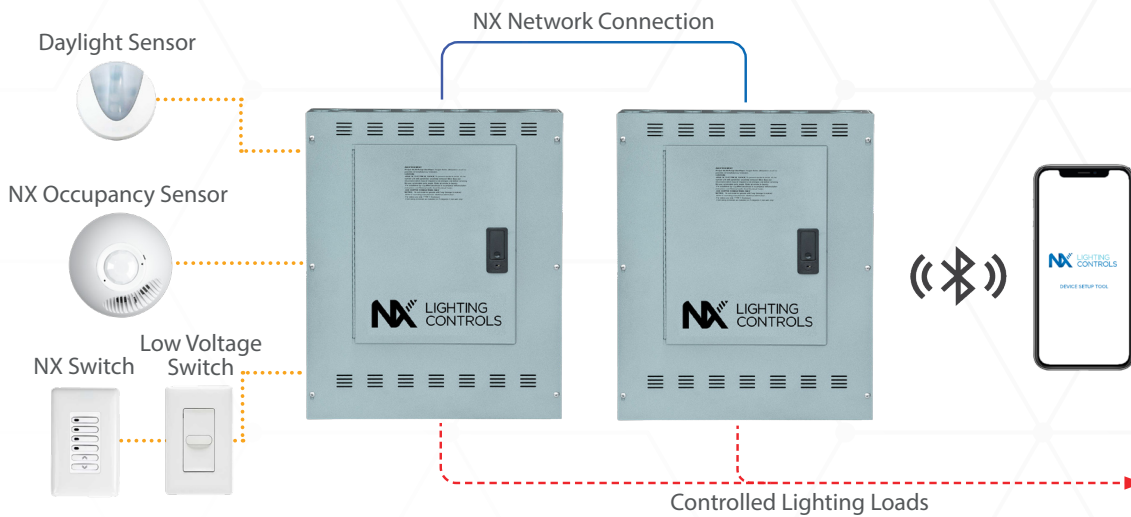

Deployment Strategies

The NX Panel provides several deployment options including standalone, networked and multiple panels configured.

Networked Panel Deployment

NX Panel Features

All inputs are low voltage and hard-wired to terminal blocks in the panel. Input power supply is multi-tapped or universal for typical service voltages. Line voltage terminals are located with generous space for easy connection.
