

EVOLVE

Lighting Poles & Brackets

Designed for Roadway, Area and Decorative Post Tops

EVOLVE

Intro/Product Overview

Current offers steel and aluminum pole and bracket mounting solutions that complement our wide variety of outdoor area lighting and roadway lighting fixtures. Choose from tapered and non-tapered pole designs and heights of up to 60 feet (18 meters).

Many of our poles and brackets also accommodate single or multiple luminaire mounting, giving you greater flexibility in your outdoor lighting design. From sleek and stylish poles for decorative post top lighting fixtures to street lighting poles that have what it takes to provide illumination for roadways over many years.

Pole Selection Guidelines

GENERAL

A lighting pole must support the weight of the equipment you will mount on it and withstand the effect of the maximum velocity winds to which it will be subjected. Therefore, the basis for selecting poles from this catalog is the weight and Effective Projected Area (EPA) data shown in Pole Selection Tables under the heading “Recommended Total Load.” Before choosing a pole, determine the maximum total EPA and the total weight of all luminaires, brackets, signs, decorations, and other equipment that you plan to mount on it. EPA and weight data are given on product and accessory pages.

EFFECTIVE PROJECTED AREA (EPA)

The formula to calculate the force of wind acting on an object is: projected area of the object X coefficient of drag X velocity pressure of the wind. Effective projected area or EPA is the product of the first two. For example, one luminaire has an projected area of 2.62 square feet and a drag coefficient of 0.57. Its EPA is 2.62X0.57 = 1.5 square feet. When mounting a luminaire, the centroid of the effective projected area (approximate center of the luminaire projected area) should be no higher than 18 inches (457mm) above the top of the luminaire mounting tenons.

Maximum Expected Wind Velocities

Recommended Total Load figures given in Pole Selection Tables are based on specific wind conditions–i.e., certain MPH or miles per hour isotach. The map on the next page gives maximum expected wind velocities in the contiguous United States, based on a 50-year mean recurrence interval. Refer to the map to find the maximum expected wind condition for the area where you will be installing the lighting equipment.

Velocities recorded on the map are expected isotach values, not gust values. Poles are actually designed for maximum gust velocities considerably greater than the MPH or miles per hour isotach values. Design gust velocities include a gust factor of 1.3 and appropriate height factors.

There are some locations where unusual local wind conditions exist. In these areas, wind speeds could be considerably higher than those in the surrounding areas. These may necessitate the use of a greater isotach value than is shown on the map.

STEP-BY-STEP PROCEDURE FOR SELECTING POLES

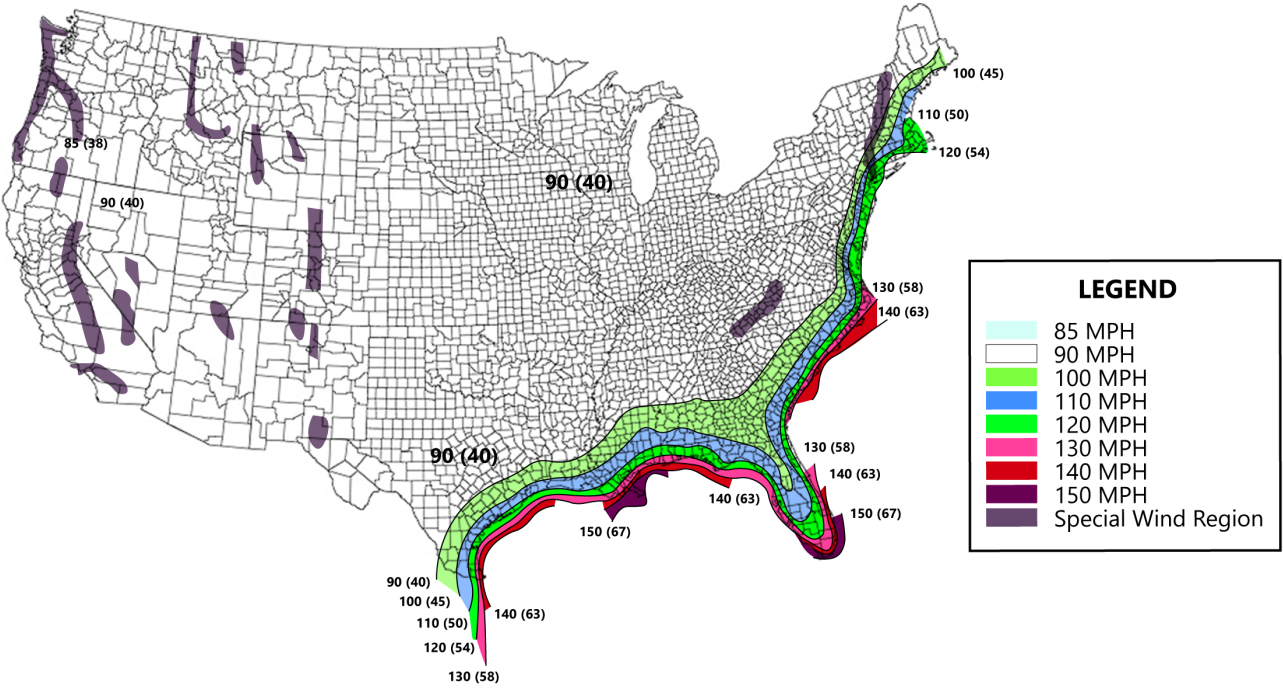

- 1. Choose the luminaire you plan to use and decide how many will be mounted per pole.
- 2. Pick an appropriate mounting method, such as:
 - a. A single decorative post top luminaire on a 10 to 20 foot (3 to 6 meter) pole having a 3-inch (76mm) OD top;
 - b. Single or multiple decorative luminaires on arms supplied with the luminaire;
 - c. One or more floodlights on 20 to 60 foot (6 to 18 meter) poles, either singly on a top tenon, or in groups on brackets;
 - d. Roadway luminaires on arms attached to the side of a pole. Pick the correct length and number of arms per pole (one per luminaire).

- 3. From data on the selected luminaire page, find the weight and EPA of each luminaire. Multiply these numbers by the number of luminaires per pole to determine the total weight and EPA.
- 4. Scan the pole pages to find a picture of the luminaire you plan to use. These are given at the top of the page under the heading “Applications.” Choose an appropriate pole.
- 5. If brackets are needed, study the pole and accessory pages. Read the weight and EPA for the appropriate bracket.
- 6. Look up the weight and EPA for any other accessories.
- 7. Total the weight and EPA of all equipment.
- 8. Check the wind velocity map to find the MPH of the geographic location where the poles will be installed.
- 9. Study the Ordering Number Logic so you’ll be familiar with the way we’ve devised our ordering numbers. DO NOT use the logic for ordering: Suggested Ordering Numbers are given in the Selection Tables.
- 10. Refer to the Selection Table of the pole you’ve decided to use. Start at the top, because the most economical system will be the first in the tabulation that is appropriate for your application:
 - a. Find the desired nominal mounting height in the first column.
 - b. For roadway poles, pick the desired arm length and number of arms (next two columns).
 - c. In the Recommended Total Loads section, make sure the total weight of the lighting equipment does not exceed the maximum listed.
 - d. Under Effective Projected Area, find the MPH for the mounting location geographic zone. Read the EPA value in the appropriate column and check that the equipment you’re using will not exceed this value.
 - e. Read the appropriate Ordering Number from the Selection Table.
- 11. Refer to the Ordering Number Logic to see if there are any substitutions or options required. Follow the instructions for substitutions. If you wish to include one or more options, add the indicated letter(s) to the end of the listed Ordering Number.
- 12. If brackets or other accessories are required, refer to appropriate pages and find the correct Ordering Numbers.

Warning

Consult qualified professionals for verification of your pole, luminaire, accessory, base, and foundation selection. These design methods are guidelines only. Current takes no responsibility for system design.

WIND SPEED GUIDELINES

Adapted from the 6th edition AASHTO publication *Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals*, 2013, by the American Association of State Highway and Transportation Officials, Washington, D.C. Used with permission.

This wind map is a general guide for selection of design wind speeds based on the installation location. Always consult the local Authority Having Jurisdiction (AHJ) to determine the correct design wind speed requirements specific to your region and installation site.

The wind speed map shown above is adapted from AASHTO LTS Edition 6 2013 showing 50 yr mean recurrence interval values for nominal designs with 3-second gust wind speeds (MPH) at or below 10m (33 ft) above ground for the Exposure C category (i.e. open terrain with scattered obstructions). The wind map can be used to determine the approximate wind speed for your installation location. If your site is located between two different wind speed isotach lines, the higher speed should be used.

This wind map is provided or basic reference only. GE Current, a Daintree company will not be responsible for unusual circumstances where normal wind loads may exceed expectations. Specifier must select appropriate product based on site-specific knowledge of design wind speed requirements.

Warning

Local geography and conditions, as well as the installation configuration, may impact wind loading and therefore must be considered when selecting a pole. Do not attach banners or other appendages to poles unless designed or approved by Current.

SPECIFICATION FEATURES
• Round Tapered Aluminun Shaft
• Satin Ground Finish
• Shaft Lengths from 20 to 40 feet
• Choices include 1-4 arms
• Single Member or Truss Arms included
• Anchor bolts can be shipped either with pole or separately (if separate, please make the request at time or order)

Ordering Number Logic (See Pole Selection Table for actual Ordering Numbers)

R R T A

Product Type	Pole Cross Section	Shaft Shape	Pole Material	Nominal Mounting Height (ft)	Mounting	Arm Length (ft)/ Number	Shaft Dimensions		Wall Thickness (in)	Options
							Bottom Shaft OD (in)	Top OD (in)		
R = Roadway	R = Round	T = Tapered	A = Aluminum	20 = 20	SA =Single Member Arm	4S = One 4' Arm	6.0 = 6.0	1 = 4.5	B = 0.188	E = Electrical Festoon Box

Ordering Number Logic (See Pole Selection Table for actual Ordering Numbers)

Product Type	Pole Cross Section	Shaft Shape	Pole Material	Nominal Mounting Height (ft)	Mounting	Arm Length (ft)/ Number	Shaft Dimensions		Finish	Options
							Bottom Shaft OD (in)	Gauge		
R = Roadway	R = Round	T = Tapered	S = Steel	20 = 20	SA = Single Member Arm	4S = One 4' Arm	6.5 = 6.5	7 = 7	GV = Galvanized	E = Electrical Festoon Box
				25 = 25	TA = Truss Arm	6S = One 6' Arm	7.0 = 7.0	10 = 10	PP = Prime Painted	
				30 = 30		8S = One 8' Arm	7.5 = 7.5	11 = 11		
				35 = 35		10S = One 10' Arm	8.0 = 87.0			
				40 = 40		12S = One 12' Arm	8.5 = 8.5			
				45 = 45*		15S = One 15' Arm	9.0 = 9.0			
				50 = 50*		4D = Two 4' Arms	9.5 = 9.5			
						6D = Two 6' Arms	10.0 = 10.0			
						8D = Two 8' Arms	10.5 = 10.5			
						10D = Two 10' Arms				
						12D = Two 12' Arms				
						15D = Two 15' Arms				
						6T = Three 6' Arms				
						6Q = Four 6' Arms				
				NOTE: *Shaft over 40 ft may be two piece with overlapping joint (upper portion T1 gauge, lower portion gauge as listed)		NOTE: Arms are included with poles; Two arms at 180°, three at 120°, and four at 90°			NOTE: If galvanized finish is required substitute GV for PP in ordering number given in Pole Selection Table	NOTE: If this option is required add E to ordering number listed in Pole Section Table

NOTE : All poles with anchor bolts need to be entered as 2 line items:
1. The line item for the Pole ONLY, will be the corresponding pole SKU + "-LAB" (Less Anchor Bolts). Example: RRTS20XX4S6.57GV-LAB
2. The line item for the Anchor Bolts and Anchor Bolt Template ONLY, will be the corresponding pole SKU + "-BOLT." Example: RRTS20XX4S6.57GV-BOLT

ROADWAY LIGHTING POLES: Round Tapered Steel (RTS)
20' to 50' feet (6 to 15 meters)

SPECIFICATION FEATURES
• Square Straight Aluminum Shaft
• Dark Bronze finish is Standard
• Shaft Lengths from 10 to 30 feet
• Pole comes drilled as specified for single or multiple Luminaires
• Top Tenon is an available option
• Shipped with Pole: Handhole and Cover, Electrical Grounding Kit and Pole is spirally wrapped with rip cord removal system
• Anchor bolts can be shipped either with pole or separately (if separate, please make the request at time or order)

SPECIFICATION FEATURES
• Round Straight [non-tapered] Steel Shaft
• Dark Bronze Powdercoat finish Standard
• Shaft Lengths from 10 to 30 feet
• Single or Multiple Luminaire Mounting
• Top tennon choice
• Shipped with Pole: Handhole and Cover, Electrical Grounding Kit and Pole is spirally wrapped with rip cord removal system
• Anchor bolts can be shipped either with pole or separately [if separate, please make the request at time or order]

Suggested Luminaire Applications

SPECIFICATION FEATURES
• Round Tapered Aluminum Shaft
• Satin Ground Finish
• Shaft Lengths from 10 to 20 feet
• Three inch top OD for mounting a single Post Top Luminiare
• Black or Dark Bronze Powdercoat finishes available
• Choice of Anchor, Transformer or Embedded Base
• Anchor bolts can be shipped either with pole or separately (if separate, please make the request at time of order)

Ordering Number Logic (See Pole Selection Table for actual Ordering Numbers)

Suggested Luminaires & Applications

Roadway

Engineered to direct light precisely where it’s needed most, **Evolve LED Roadway fixtures** create a dramatic difference in visibility, safety and operational efficiency. Choose from a wide selection of styles and hundreds of photometric options to achieve superior performance with slashed energy and maintenance costs. Perfect for new construction and renovation projects. Pairing with our **LightGrid™** outdoor wireless control system allows remote operation and monitoring of all fixtures through a Web-enabled central management system.

ERLC

ERL1

ERL2

Area/Site

Evolve LED Area lights are perfect for downtowns, hospital grounds, college campuses, shopping mall, business complexes and residential neighborhoods. A wide range of optical patterns, color temperatures, lumen packages, and mounting configurations meet a variety of needs. Precise engineering reduces offsite visibility via symmetric and asymmetric distributions, improves security light levels and virtually eliminates maintenance costs over long lamp life. Energy expense is dramatically reduced compared to HID.

EACL
(Compact Low Wattage)

EALS
(Standard)

EALP
(Premium)

Decorative Post Top

When the look of your fixture needs to compliment the architecture and landscaping design of a particular environment, **Evolve LED Post Tops** are the perfect choice. Choose from a range of distinctive models, including historically accurate carriage and coach fixtures in both angular and curvilinear profiles. Set the stage for a truly authentic occupant experience with fixtures that feel just right while providing advanced-technology performance via superior energy efficiency and quality of light, improved horizontal and vertical uniformity, reduced glare and precise lighting control.

Floodlighting

Evolve LED Flood lights bring the security and safety of superior LED illumination to a range of outdoor locations. With a great load, performance and durability, these fixtures offer versatility while meeting your outdoor lighting requirements. **Evolve** floodlights are designed for parking lots, buildings and grounds, facades, industrial yards, recreational areas, billboards and other general purpose area lighting applications. Hazardous location models are UL844 listed.
