formation and Iminstallinstr-LM-1205L_R01

- 1. Loosen the two cover retaining screws on the sides of the unit, rotate the heads for clearance, and remove the cover by lifting it up and outwards.
- 2. If lighting heads will be retained in the top mounted position, go to step 3. If lighting heads are to be relocated to side mounted position, proceed as follows:
 - a. Snap out the lighting head knockouts on the sides of the unit.
 - b. Loosen the locking nut that retains the stem for each lighting head.
 - c. Slide each lighting head out of its present slot.
 - Note: It is not necessary to disconnect the lighting head leads from the circuit board.
 - d. Insert the stem of each lighting head into the side opening slots.
 - e. Tighten the locking nut on each stem so that the lamp heads turn with some resistance.
- f. Plug the top mounted opening slots with the hole plugs contained in the hardware pack.3. Fasten enclosure to electrical outlet box and/or wall surface using appropriate hardware.
 - Note: The enclosure can be mounted to 3", 4" octagon, or 4" square electrical boxes, and to standard plaster rings. Large enclosures have additional keyhole slots for surface mounting. a " 7/8" diameter knockout is provided on the top and on each side of the enclosure for surface wiring conduit.
- 4. Connect remote lamps (if used) to blue (+, fused) and Yellow(-) leads (Fig.1).
- Connect 120 or 277VAC input connections to transformer (Fig.1). Connect green wire to building ground. Note: Insulate the unsuded transformer lead to prevent potential shock hazard.
- Dertermine proper battery orientation from Fig.2 (single harness lead connection) or Fig.3 (double harness lead connection). Battery is positioned to the left of the circuit board. Remove protective liner from double sided tape, located on floor of enclosure.

Note: a 1/4" space (minimum) is required between the front of the battery and the inner lip of the enclosure to provide clearance for cover. Place battery into enclosure, and press down firmly to secure battery to enclosure.

- 7. Connect positive (+, red) and negative (-, yellow) battery harness leads from printed circuit board to corresponding battery terminals as shown in Fig.2 or Fig.3.
- 8. Check all wiring for loose or missing connections.
- 9. Replace cover. Be sure that each "star washer is properly positioned between the screw head and the outer surface of the cover. Tighten retaining screws. Adjust lighting heads to desired position.
- Energize unit with AC power. Press and hold the "TEST" button (see Fig. 1 for "TEST" button location) to confirmillumination and proper aiming of emergency lamps. ("AC ON" indicator LED should go off). Release the "TEST" button; emergency lamps should extinguish. Normal operation begins.
- 11. Normal Operation: with power supplied, "AC ON" LED indicator is illuminated and emergency lamps are off.

ROUTINE TEST CYCLING

1. Monthly: If there has been no power failure, press and hold the "TEST" button for at least thirty (30) seconds to confirm emergency lamp operation. Release "TEST" button to return to battery charging mode.

2.Once a year: Performa full battery conditioning cycle by de-energizing the AC circuit to which the unit is connected, and allow the unit to operate for ninety (90) minutes on battery power. Following successful test, energize AC circuit to begin battery charging cycle.

Note: AC ON LED blinks when battery is fully charged.

REPLACING BATTERIES

- 1. De-energize the AC power supply to the unit.
- 2. Remove enclosure cover.
- 3. Disconnect positive (+, red) battery lead.
- 4. Remove defective battery. Recycle responsibly. Replace with genuine manufacturer battery only.
- 5. Place new battery in enclosure. Make connections following steps outlined above.
- 6. Test unit.

REPLACING EMERGENCY LAMP(S)

- 1. De-energize the AC power supply to the unit.
- 2. Remove enclosure cover.
- 3. Disconnect positive (+, red) battery lead.
- 4. Loosen the locking nut that retains the stem for each lighting head.
- 5. Slide lighting head out of its slot.
- 6. Insert the stem of each lighting head into the side opening slots.
- 7. Tighten the locking nut on each stem so that the lamp heads turn with some resistance.
- 8. Test unit.
