

### Manage your entire lighting network through one single interface for diverse connected solutions

The NX Area Controller is an on-site server that can manage your entire lighting network whether it is deployed wirelessly, wired, room-based, panels throughout an entire building and/or exterior spaces. It can be accessed securely and remotely from anywhere in the building. Its benefits include:

#### Facility-Level Scheduling

- User friendly interface to schedule events
- Built-in time server to synchronize all facility events
- Easily schedule one off events
- Create custom holidays or use standard available

#### Multi-Tier Security

- User Authentication & Password Management
- Secure Web Communication (https)
- Transport Layer Security (TLS 1.3)
- Secure OS with multi-year patch management

#### Over The Air (OTA) Updates, Remote Access and Control

- Secure communication with data encryption
- Permission based access
- Remotely perform device firmware updates\*

\* Subject to Customer permission & allowed access

#### BACnet® Integration

- Native BACnet interface built-in
- No points restriction or license requirements
- Easy configuration from UI
- Seamless integration with all major BAS Systems

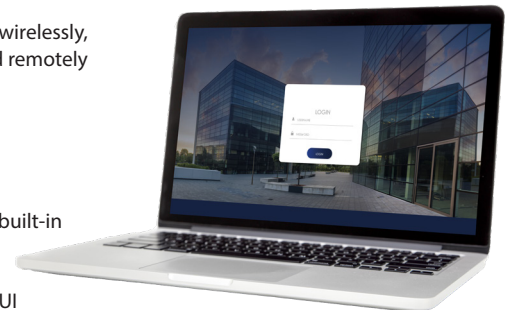

#### User Management

- Role based authorization
- Add multiple users with same role
- Password Management for each user
- Add or delete users

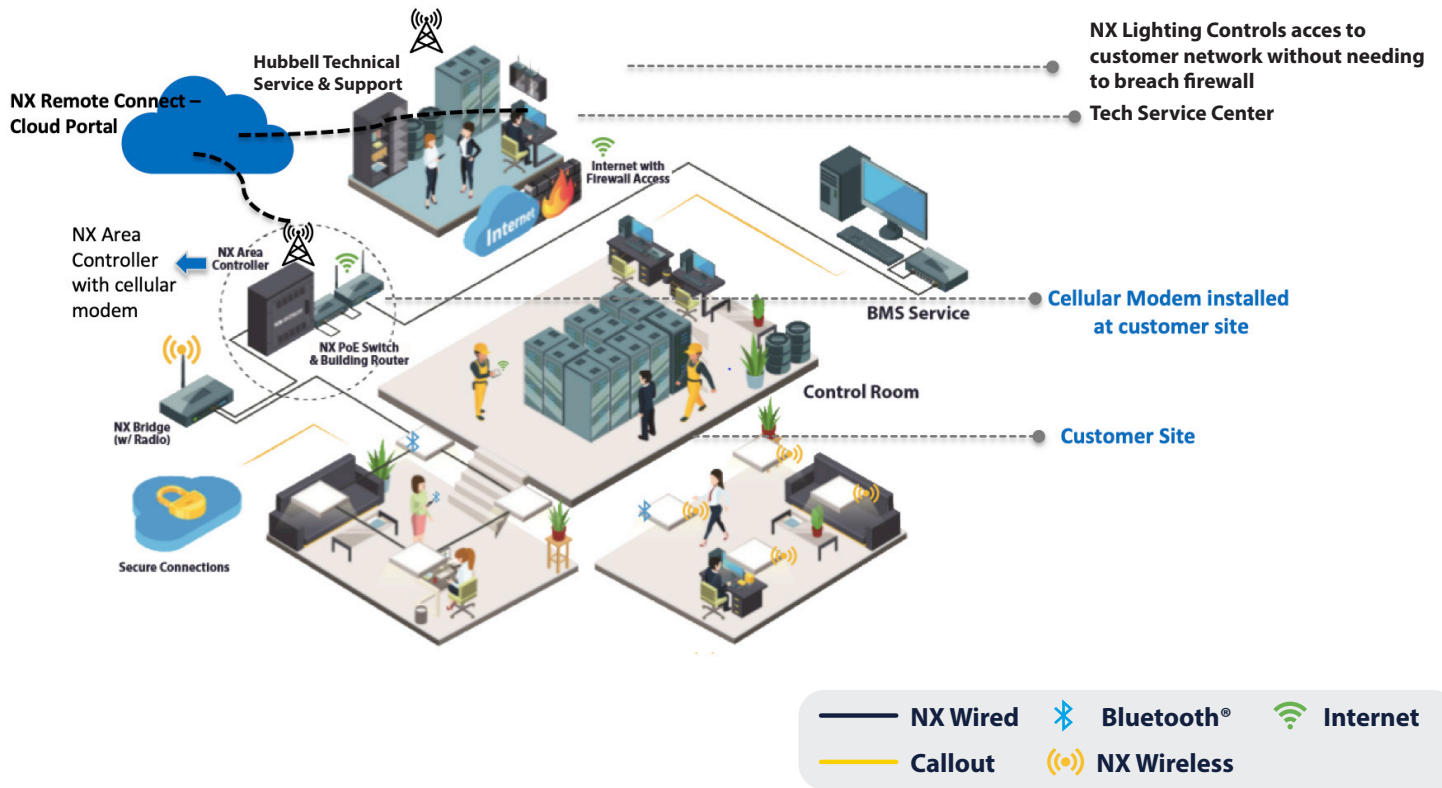

#### Web-based System Configuration

- No software downloads or keys required
- Supports all major web browsers
- Provides powerful tools to commission entire NX system
- View and manage entire NX based facility lighting
