DETECTION COVERAGE

This figure indicates the maximum distance at the highest mounting height with 100% sensitivity.

LUX ON/OFF

Adopted dual PD technology, PRC Motion Sensor is able to differentiate artificial light brightness from natural light after installed inside the fixture, and automatically turn off light when ambient brightness exceeds preset lux level.

Preconditions to use the Lux-off function:

1. Stand-by time is + ∞
2. Stand-by dimming level is on 10%, 20%, 30%, or 50%
3. Daylight threshold is on 10Lux, 30Lux, 50Lux, or 100Lux (About 20% error between actual and reference values).

- Press to reduce brightness(100%-0%).

CRN2-OCS PERFORMANCE

1. Automatic On/Off Function

With sufficient daylight, even when motion is detected, light will remain OFF.

With insufficient daylight, the sensor turns light ON when motion gets detected.

Light dims to stand-by level if no motion detected after hold time.

Light OFF when ambient lux level is higher than preset lux amount.

2. Corridor Function, Bi-level Dimmable

With sufficient daylight, the sensor keeps light OFF even motion gets detected, daylight function is on.

With insufficient daylight, the sensor turns light ON when motion gets detected.

After there's no motion detected, the sensor keeps light ON brightness setting for hold time.

After holdtime, sensor dims light to stand-by dimming level for stand-by time.

The sensor turns OFF light automatically after the stand-by time when there's no motion detected.

3. Daylight Disable

The sensor turns light ON when motion gets detected.

The sensor keeps light ON for hold time after motion leaves.

After hold time, sensor dims light to stand-by dimming level for stand-by time.

The sensor turns OFF light automatically after the stand-by time when there's no motion detected.
