## Remedi ${ }^{\text {™ }}$

## FEATURES

- The unique design eliminates the issues with typical multi-function bed lights while delivering enhanced performance
- Four distinct optical compartments deliver the recommended illumination levels for ambient, reading, examination and night lighting
- The optional full-length, indirect night light is available in white or amber light color and can conveniently be controlled from either end of the luminaire with the 3-way switching option
- The standard antimicrobial finish and soft form supports infectious disease control efforts

## SPECIFICATIONS

## CONSTRUCTION

- Die cast and extruded aluminum body
- 16-gauge galvanized steel back plate and 20-gauge cold rolled steel wireway
- The acrylic lens present a smooth room-side surface for simple wipe-down
- The luminaire body has a polyester powder coat paint finish with an antimicrobial compound additive to inhibit the growth of microbes
- Three standard colors are available with custom colors available upon request

## OPTICS

- LED source is available in CCTs of 3000 K , 3500K, 4000K and 5000K CCT with either $>80$ or $>90 \mathrm{CRI}$
- The 90 CRI has an R9 of 70 for excellent color rendering
- LEDs have > 60,000 hour life with $80 \%$ lumen maintenance

## INSTALLATION

- The back plate is mounted over the electrical junction box and secured to the wall structure or with wall anchors. The housing latches onto back plate and is secured with fasteners

## ELECTRICAL

- Individual, universal-voltage drivers $(120-277 \mathrm{~V}, 50 / 60 \mathrm{~Hz}$ ) are provided for each optical compartment
- Some options require a specific voltage to be selected
- Remedi has a variety of switching options including single and four-pole pull switches, low voltage controller options (to interface with patient pillow switch by others) or less switches for wall control (by others)
- The night light option can be controlled with a wall switch (by others) or with 3-way, low-profile stainless steel switches on the luminaire

## ELECTRICAL (CONTINUED)

- The 3-way switches provide On/Off control and dimming of the night light
- The optional Bed Safety Switch (BSS) reduces the potential for luminaire damage from movement of motorized patient beds

## CERTIFICATIONS

- Built and tested to UL1598 standard and bears the CSAus label for Damp Locations

## WARRANTY

- 5 year warranty

## ADDITIONAL INFORMATION

## LVC SELECTION CHART

The Low Voltage Controller (LVC) option allows control of the luminaire functions from a patient pillow switch, bed side rail or wall switch with normally-open momentary dry contacts. Depending on the number of modes to be controlled, various control options are available.

| Independent | I | Dedicated On/Off control for a single load. |
| :---: | :---: | :--- |
| Sequential | S | On/Off Control of two loads by sequentially <br> cycling through them |
| Step dim | ST | Stepped light levels in 25\% increments with <br> each toggle of the low voltage switch. |
| Smooth dim | SM | Smooth increase in light level from a starting <br> point of 25\% by continuing to press the switch. <br> When released, pressed and held again, <br> the light level decreases until the switch is <br> released. |
